CEIOPS’ Advice for Level 2 Implementing Measures on Solvency II:
Supervision of Group Solvency for Groups with Centralised Risk Management

(former Consultation Paper 66)

Annex 1 – Comparison of requirements between consistent group wide risk management and centralised risk management ............................................. 31
Annex 2 – Application and decision process ................................................ 34
1. Introduction

1.1. In its letter of 19 July 2007, the European Commission requested CEIOPS to provide final, fully consulted advice on Level 2 implementing measures by October 2009 and recommended CEIOPS to develop Level 3 guidance on certain areas to foster supervisory convergence. On 12 June 2009 the European Commission sent a letter with further guidance regarding the Solvency II project, including the list of implementing measures and timetable until implementation.

1.2. This Advice aims at providing advice for the Level 2 implementing measures referred to in Article 241 of the Solvency II Framework Directive (Level 1 text). Given the asymmetries in Subsection 6 of the Level I text, there is room for additional guidance on certain aspects of group risk management.

1.3. It is important to differentiate between centralised risk management (CRM) on the one hand and group wide risk management including consistent implementation of the risk management in all undertakings forming part of a group on the other hand.

1.4. The requirement to establish an effective risk management on the level of the group as well as the requirement to implement risk management and internal control mechanism consistently in all undertakings included in the scope of group supervision (group wide risk management) as laid down in Article 246 (1) of the Level 1 text are general in scope, and applicable to all (re)insurance undertakings in a group without exception. All risk management systems must live up to the high standards set by the Level I text. This paper aims at clarifying how those high standards interact with centralised risk management and group wide risk management.

1.5. Article 236 of the Level 1 text, however, deals with the implementation of a regime for supervising groups with centralised risk management where the risk management processes and internal control mechanism of the parent undertaking cover the subsidiary. Groups must submit an application to be made subject to the rules in Subsection 6, whereas Art. 246 will apply to all groups.

1.6. Centralised risk management is linked to a transfer of tasks relating to risk management from one company to another within an insurance group. However, a subsidiary always remains responsible for the appropriateness of its governance system including risk management at solo level, even if part of a group.

1.7. CEIOPS’ reminds that (re)insurance undertakings have to comply with local laws (eg tax law) irrespective of the approach to risk management adopted by the group. Application of CRM should not prejudice any national legal or regulatory requirements of Member States that apply to a

---

1 See the official journal http://eur-lex.europa.eu/JOHtml.do?uri=OJ%3AL%3A2009%3A335%3ASOM%3AEN%3AHTML
(re)insurance undertakings (e.g. national company law requirements on board members).

1.8. The principles and requirements regarding the governance system on solo level including risk management processes and internal control mechanisms are dealt with in CEIOPS’ Advice to the European Commission on the System of Governance\(^2\). The Advice on Supervision of Groups with Centralised Risk Management does not provide a conclusive advice on the group governance system, however some issues regarding group governance are considered.

1.9. It is important to note that Article 246 is not subject to a specific implementing measure. However, some issues and principles of group governance are included in this advice, in particular relating to group wide risk management and the differentiation between centralised risk management and group wide risk management.

1.10. In principle, the application to be subject to the supervisory regime pursuant to Articles 238 and 239 of the Level I text does not mean any significant change in group supervision, but cooperation processes between group supervisor and the supervisory authorities concerned are described in more detail in the Level 1 text. However, deviating from standard procedures, a non binding mediation with CEIOPS is foreseen in the Level I text when the provisions of subsection 6 apply and a capital add-on or the use of the standard formula for the calculation of the solo SCR is imposed by the solo supervisory authority concerned.

1.11. Generally, the same procedures as under the application of subsection 6 can be used by all colleges of supervisors for their coordination arrangements.

1.12. One major aspect of the decision to be subject to the rules of subsection 6 is the application of national and regional subgroup supervision according to Articles 216 and 217. As stated in the Level 1 text, no national and regional subgroup supervision is possible if subsection 6 applies. That option should not be used by groups in order to avoid national and regional subgroup supervision.

1.13. With regard to the opportunity to apply for a single group wide Own Risk and Solvency Assessment (ORSA) and Solvency and Financial Condition Report (SFCR) there is no difference between groups applying to be subject to the supervisory regime pursuant to Articles 238 and 239 and all other groups. In line with the Level I text, all groups can apply for a single group wide ORSA (Article 246(4)) and SFCR (Article 256), independent of the permission to be subject to the supervisory regime pursuant to Articles 238 and 239.

1.14. The application according to Article 236 of the Level I text requires a more coordinated cooperation between supervisors in the Supervisory College. Therefore, the application and cooperation process is tackled in detail in this advice.

\(^2\) See CEIOPS Consultation Papers: \url{http://www.ceiops.eu/index.php?option=content&task=view&id=581}
1.15. The proportionality principle according to Article 29(3) is considered when assessing the application of a group to be subjected to the supervisory regime pursuant to Articles 238 and 239 of the Level I text. That principle applies also in case of group wide risk management.

1.16. That subsection only applies to groups with the ultimate parent undertaking located in the EEA and to their EEA subsidiaries.

1.17. As regards changes in the group structure, CEIOPS would like to remember that applying for centralised risk management is an option for the subsidiaries within the group. Not applying for that subsection does not prevent the group to take the necessary measures to integrate that subsidiary in the centralised risk management system and to apply for sub section 6 once this is achieved.

1.18. In order to make it clear what CEIOPS itself considers appropriate for Level 2 implementing measures, the relevant passages have been clearly identified by highlighting them along the text (“blue boxes”). All other comments are either views on the Level 1 text, background to proposed advice on Level 2 implementing measures or possible areas which future Level 3 guidance might cover.

2. Extract from Level 1 Text

2.1. Article 44(1)

Insurance and reinsurance undertakings shall have in place an effective risk management system comprising strategies, processes and reporting procedures necessary to identify, measure, monitor, manage and report, on a continuous basis the risks, on an individual and aggregated level, to which they are or could be exposed, and their interdependencies.

2.2. Article 236

Member States shall provide that the rules laid down in Articles 238 and 239 shall apply to any insurance or reinsurance undertaking which is the subsidiary of an insurance or reinsurance undertaking where all of the following conditions are satisfied:

(a) the subsidiary, in relation to which the group supervisor has not made any decision under Article 214(2), is included in the group supervision carried out by the group supervisor at the level of the parent undertaking in accordance with this Title;

(b) the risk management processes and internal control mechanisms of the parent undertaking cover the subsidiary and the parent undertaking satisfies the supervisory authorities concerned regarding the prudent management of the subsidiary;

(c) the parent undertaking has received the agreement referred to in the third subparagraph of Article 246(4);

(d) the parent undertaking has received the agreement referred to in Article 256(2);
(d) an application for permission to be subject to Articles 238 and 239 has been submitted by the parent undertaking and a favourable decision has been made on such application in accordance with the procedure set out in Article 237.

2.3. Article 238

1. Without prejudice to Article 231, the Solvency Capital Requirement of the subsidiary shall be calculated as set out in paragraphs 2, 4, and 5 of this Article.

Where the Solvency Capital Requirement of the subsidiary is calculated on the basis of an internal model approved at group level in accordance with Article 231 and the supervisory authority having authorised the subsidiary considers that its risk profile deviates significantly from this internal model, and as long as that undertaking does not properly address the concerns of the supervisory authority, that authority may, in the cases referred to in Article 37, propose to set a capital add-on to the Solvency Capital Requirement of that subsidiary resulting from the application of such model or, in exceptional circumstances where such capital add-on would not be appropriate, to require that undertaking to calculate its Solvency Capital Requirement on the basis of the standard formula. The supervisory authority shall discuss its proposal within the college of supervisors and communicate the grounds for such proposals to both the subsidiary and the college of supervisors.

3. Where the Solvency Capital Requirement of the subsidiary is calculated on the basis of the standard formula and the supervisory authority having authorised the subsidiary considers that its risk profile deviates significantly from the assumptions underlying the standard formula, and as long as that undertaking does not properly address the concerns of the supervisory authority, that authority may, in exceptional circumstances, propose that the undertaking replace a subset of the parameters used in the standard formula calculation by parameters specific to that undertaking when calculating the life, non-life and health underwriting risk modules, as set out in Article 110, or in the cases referred to in Article 37, to set a capital add-on to the Solvency Capital Requirement of that subsidiary.

The supervisory authority shall discuss its proposal within the college of supervisors and communicate the grounds for such proposal to both the subsidiary and the college of supervisors.

4. The college of supervisors shall do everything within its power to reach an agreement on the proposal of the supervisory authority having authorised the subsidiary or on other possible measures.

5. Where the supervisory authority and the group supervisor disagree, the matter shall, within one month from the proposal of the supervisory authority, be referred for consultation to CEIOPS, which shall give its advice within two months of such referral.

The supervisory authority having authorised that subsidiary shall duly consider such advice before taking its final decision. The decision shall
state the full reasons and shall take into account the views including reservations of the other supervisory authorities within the college of supervisors and the advice from CEIOPS.

The decision shall be submitted to the subsidiary and to the college of supervisors.

2.4. Article 239

1. In the event of non-compliance with the Solvency Capital Requirement and without prejudice to Article 138, the supervisory authority having authorised the subsidiary shall, without delay, forward to the college of supervisors the recovery plan submitted by the subsidiary in order to achieve, within six months from the observation of non-compliance with the Solvency Capital Requirement, the reestablishment of the level of eligible own funds or the reduction of its risk profile to ensure compliance with the Solvency Capital Requirement.

The college of supervisors shall do everything within its power to reach an agreement on the proposal of the supervisory authority regarding the approval of the recovery plan within four months from the date on which non-compliance with the Solvency Capital Requirement was first observed.

In the absence of such agreement, the supervisory authority having authorised the subsidiary shall decide whether the recovery plan should be approved, taking due account of the views and reservations of the other supervisory authorities within the college of supervisors.

2. Where the supervisory authority having authorised the subsidiary identifies, in accordance with Article 136, deteriorating financial conditions, it shall notify the college of supervisors without delay of the proposed measures to be taken. Save in emergency situations, the measures to be taken shall be discussed within the college of supervisors.

The college of supervisors shall do everything within its power to reach an agreement on the proposed measures to be taken within one month of notification.

In the absence of such agreement, the supervisory authority having authorised the subsidiary shall decide whether the proposed measures should be approved, taking due account of the views and reservations of the other supervisory authorities within the college of supervisors.

3. In the event of non-compliance with the Minimum Capital Requirement and without prejudice to Article 139, the supervisory authority having authorised the subsidiary shall, without delay, forward to the college of supervisors the short-term finance scheme submitted by the subsidiary in order to achieve, within three months from the date on which non-compliance with the Minimum Capital Requirement was first observed, the reestablishment of the level of eligible own funds covering the Minimum Capital Requirement or the reduction of its risk profile to ensure compliance with the Minimum Capital Requirement. The college of supervisors shall also be informed of any measures taken to enforce the Minimum Capital Requirement at the level of the subsidiary.
2.5. Article 241

In order to ensure the uniform application of Articles 236 to 240, the Commission shall adopt implementing measures specifying:

a) the criteria to be applied when assessing whether the conditions stated in Article 236 are satisfied;

aa) the criteria to be applied when assessing what should be considered an emergency situation under Article 239(2); and

d) the procedures to be followed by supervisory authorities when exchanging information, exercising their rights and fulfilling their duties in accordance with Articles 237 to 240.

Those measures designed to amend non-essential elements of this Directive by supplementing it shall be adopted in accordance with the regulatory procedure with scrutiny referred to in Article 301(3).

2.6. Art. 246(1)

The requirements set out in TITLE 1, Chapter IV, Section 2 shall apply mutatis mutandis at the level of the group.

Without prejudice to the first subparagraph, the risk management and internal control systems and reporting procedures shall be implemented consistently in all the undertakings included in the scope of the group supervision pursuant to points (a) and (b) of Article 213(2) so that those systems and reporting procedures can be controlled at the level of the group.

2.7. Article 246(4)

Member States shall require the participating insurance or reinsurance undertaking or the insurance holding company to undertake at the level of the group the assessment required by Article 45. The own risk and solvency assessment conducted at group level shall be subject to supervisory review by the group supervisor in accordance with Chapter III.

Where the calculation of the solvency at the level of the group is carried out in accordance with the accounting consolidation-based method referred to in Article 230, the participating insurance or reinsurance undertaking or the insurance holding company shall provide to the group supervisor a proper understanding of the difference between the sum of the Solvency Capital Requirements of all the related insurance or reinsurance undertakings of the group and the group consolidated Solvency Capital Requirement.

Where the participating insurance or reinsurance undertaking or the insurance holding company so decides, and subject to the agreement of the group supervisor, it may undertake any assessments required by Article 45 at the level of the group and at the level of any subsidiary in the group at the same time, and may produce a single document covering all the assessments.

Before granting the agreement in accordance with the third subparagraph, the group supervisor shall consult the members of the college of
supervisors and duly take into account any views and reservations. Where the group exercises the option provided in the third subparagraph, it shall submit the document to all supervisory authorities concerned at the same time. The exercise of that option shall not exempt the subsidiaries concerned from the obligation to ensure that the requirements of Article 45 are met.

2.8. Article 256(2)

Where a participating insurance or reinsurance undertaking or an insurance holding company so decides, and subject to the agreement of the group supervisor, it may provide a single solvency and financial condition report which shall comprise the following:

(a) the information at the level of the group which must be disclosed in accordance with paragraph 1;

(b) the information for any of the subsidiaries within the group which must be individually identifiable and disclosed in accordance with Articles 51 and 53 to 55.

Before granting the agreement in accordance with the first subparagraph, the group supervisor shall consult and duly take into account any views and reservations of the members of the college of supervisors.

3. Advice

Explanatory Text

3.1. The rules governing the supervision of group solvency with respect to the groups with centralised risk management can be applied by a group of insurance or reinsurance undertakings if the following conditions are fulfilled

a) The subsidiaries concerned are included in the group supervision carried out by the group supervisor in accordance with Title III of the Level I text.

b) The two following conditions are met:

• The risk management processes and internal control mechanisms of the parent undertaking cover the subsidiary.
• Supervisory authorities concerned have been satisfied as far as the prudent management of the subsidiary is concerned by the parent undertaking.

c) The Group supervisor has agreed on the preparation of a single document covering the ORSA on Solo and Group Level.

d) The Group supervisor has agreed on the preparation of a single solvency and financial condition report for the whole group.

e) The permission to be subject to the supervisory regime pursuant to Articles 238 and 239 has been granted using the process laid out in Article 237.
3.2. In this draft advice only the conditions set out in point b) are tackled in
detail. For Points a), c), d) and e) further guidance might be developed on
Level III only or might be developed through other consultation papers.

3.1. General Principles of group-wide risk management

3.3. In the Level I text two concepts of risk management approaches are
introduced. On the one hand, there is a requirement for a consistent group
wide risk management as stated in Article 246 (1). On the other hand, there
is the concept of centralised risk management linked to the application of
Article 236 of the Level I text.

3.4. CEIOPS considers the two concepts of consistent group wide risk
management and centralised risk management not opposing but rather
complementary. Consistent group wide risk management has to be applied
by all members of a group. If the group subjects all or part of its
subsidiaries to subsection 6, this clearly constitutes an addition to an
already well functioning group wide risk management system. Furthermore,
CEIOPS considers it crucial that only a well documented and transparent
centralised risk management system may qualify for the application of
articles 238 and 239 of the Level 1 text. Due to the heterogeneity of group
structures and systems, the decision on the application has to be taken on a
case by case basis in order to take into account the specificities of each
applicant.

3.5. CEIOPS points out that the impact on the policyholder and the supervisory
review process is a crucial element when assessing the appropriateness of
the organisation of risk management. Therefore, no decision taken shall
harm interests of policyholders or should result in a breach of regulatory
regulations.

3.6. A summary of the requirements of consistent group wide risk management
and centralised risk management is attached in a table in Annex 1.

CEIOPS´Advice

3.7. In principle, the application to be subject to the supervisory regime
pursuant to Articles 238 and 239 of the Level I text does not mean any
significant change in group supervision, but cooperation processes between
group supervisor and the supervisory authorities concerned are described in
more detail in the Level 1 text. CEIOPS considers the two concepts of
consistent group wide risk management and centralised risk management
not opposing but rather complementary. Consistent group wide risk
management has to be applied by all members of a group. If the group
subjects all or part of its subsidiaries under the regulations of articles 238
and 239 of the Level 1 text requiring centralised risk management to be
implemented, this clearly constitutes an additional requirement based upon
a well functioning group wide risk management.

3.8. A thorough documentation and transparency of risk management constitute
the main pillars for an application to articles 238 and 239 of the Level 1
Due to the heterogeneity of group structures and systems, the decision on the application has to be taken on a case by case basis in order to take into account the specificities of each applicant. CEIOPS points out that the impact on the policyholder and the supervisory review process is a crucial element when assessing the appropriateness of the organisation of risk management. Therefore, no decision taken shall harm interests of policyholders or should result in a breach of regulatory regulations.

3.2. Principles of Consistent Group Wide Risk Management

3.9. According to Article 246(1) of the Level 1 text the governance requirements set out with respect to solo undertakings shall apply mutatis mutandis at the level of the group. This implies that the ultimate parent undertaking is – without prejudice to its proper obligation to have in place a robust governance system at solo level – required to establish an effective system of governance at the level of the group which provides for sound and prudent management of the group business. This section does not constitute a conclusive Level II advice on the requirements of a group governance system. Nevertheless the views mentioned consecutively outline CEIOPS general view on governance issues on group level.

3.10. In addition, Article 246(1) second subparagraph of the Level 1 text requires the risk management and internal control systems and reporting procedures to be implemented consistently in all undertakings included in the scope of group supervision pursuant to points (a) and (b) of Article 213 (2) so that those systems can be controlled at the level of the group.

3.11. A “consistent” implementation means that all relevant processes and procedures are implemented coherently within the whole group. This ensures a common understanding of the needs for functioning and reporting of risk management and enhances comparability and the quality of results. However, consistency does not mean that local or/and entity specificities should be disregarded.

3.12. Each insurance or reinsurance undertaking is required to have in place an adequate risk management system on solo level. This responsibility is not diminished by the fact, that an insurance or reinsurance undertaking is part of an insurance group according to Article 213.

3.13. It’s the responsibility of the ultimate parent undertaking to ensure consistent implementation and an on-going monitoring of the risk management systems in all individual undertakings of the group. This also implies that appropriate tools and procedures enabling the parent undertaking to oversee and steer the functioning of risk management systems at solo level are in place.

3.14. A risk management system on group level (group wide risk management system) has to be suitable, effective and proportionate to the nature,
structure, scale and complexity of the group’s business and the risks inherent in this business.

3.15. Special focus must be given to group specific risks and interdependencies of risks, as well as to the impact of intra group transactions and risk concentrations.

3.16. Risk management is a continuous process that should be used in the implementation of the group’s overall strategy and should allow an appropriate understanding of the nature and significance of the risks to which the group and its individual undertakings are exposed to.

3.17. Decisions taken by risk management on group level shall always consider the impact on the group’s risk situation to ensure that group’s solvency and financial situation are not jeopardized. Certainly, this applies to both, solo and group level at the same time.

3.18. In order to ensure the effectiveness and consistency of group wide risk management, the processes and procedures should be regularly - at least annually - evaluated and if necessary adjusted (e.g. if changes in the group structure take place). This is especially important if changes in the group structure take place. The set up as well as the regular evaluation of the group wide risk management should not only follow on a top down, but also a bottom up approach.

3.19. According to Article 246(1), the requirements for a system of governance shall apply mutatis mutandis at the level of the group. Consequently, the requirements for risk management (including the establishment of certain key functions) also apply mutatis mutandis at group level. In addition to that, an effective and consistent group wide risk management system should comprise at least the following:

A. Risk Management Function

3.20. The ultimate parent undertaking should provide for a risk management function at group level, which is equipped with competent personnel resources (Fit and Proper requirements) and adequate systems. The establishment and tasks of the risk management function at group level should be in line with the solo requirements as referred to in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance.

B. Risk Management Strategy

3.21. The ultimate parent undertaking should have a comprehensive group wide risk management strategy, which lays out the objectives and key risk management principles of the group’s risk management and has to be consistent with the group’s overall business strategy. This group wide risk management strategy has to be properly documented and further specified via policies which should be distributed to all relevant undertakings to ensure their implementation in day-to-day business at solo level.
3.22. Although each individual undertaking is responsible for its risk management strategy at solo level, it’s the responsibility of the ultimate parent company to ensure the alignment of the individual risk management strategies with the group wide risk management strategy. Furthermore, the ultimate parent undertaking should demonstrate how the group wide risk management strategy impacts each regulated undertaking included in the scope of group supervision.

C. Adequate Written Policies

3.23. The ultimate parent company should have written policies at group level that ensure that the definition, categorisation and assessment of material risks as well as the reporting procedures are harmonised within the group. These written policies should be the basis for the written policies used by the individual undertakings on solo level as referred to in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance.

3.24. Harmonised policies are necessary to ensure, that the assessment, management and reporting of risks is comparable within the group and that an effective control of the risk management systems can be carried out on group level.

D. Processes and Procedures

3.25. Appropriate processes and procedures which enable the ultimate parent undertaking to identify, measure, manage and monitor the risks the group is or might be exposed to need to provide for a sufficient link with corresponding reporting processes and procedures implemented on solo level.

E. Internal Reporting

3.26. In order to ensure consistent implementation of risk management systems, the ultimate parent undertaking has to have access to all relevant information. Therefore, appropriate reporting procedures and feedback loops that ensure that information on the risk management systems of the individual undertakings is collected and monitored on group level, have to be implemented. The reporting will in particular account for risk concentration and intra-group transactions.

F. Group Own Risk and Solvency Assessment (ORSA)

3.27. The ultimate parent undertaking should develop an appropriate own risk and solvency assessment (ORSA) process at group level and undertake at the level of the group this assessment as required by Article 246(4) first subparagraph.

G. Emergency Planning and business continuity management

3.28. An important element of group wide risk management is adequate emergency planning and business continuity management. The main

---

objective of emergency planning is to ensure, that essential business processes are not interrupted in a serious manner in the case of internal or external threats and that the economic existence and business continuity of the group is safeguarded. Emergency Planning includes well planned and organised procedures in order to enhance the stability and robustness of the undertaking and allows for quick and effective action in case of emergency situations. A precondition for sound emergency planning is an in-depth analysis of all business processes that are essential for maintenance of operations and an analysis of any potential impact of a default (Business Impact Analysis). Emergency planning therefore at least includes a comprehensive description of potential threats, procedural standards and guidelines as well as control mechanisms.

H. Internal Control System on group level

3.29. The group wide risk management system should be supported by a suitable, comprehensive and consistent internal control system. Internal control is a set of continually operating processes involving the administrative, management or supervisory body and all level of personnel of the individual undertakings and the group.

3.30. According to Article 246(2) of the Level 1 text this group internal control mechanism shall include at least adequate mechanisms as regards group solvency to identify and measure all material risks incurred and to appropriately relate eligible own funds to risks as well as sound reporting and accounting procedures to monitor and manage the intra-group transactions and the risk concentration.

3.31. The requirements for internal control as stipulated in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance should also apply at group level. In order to ensure consistency at group level and the inclusion of all relevant business areas and functions, the ultimate parent undertaking should provide a general framework for the internal control system that takes into account the scale, nature and complexity of the group and its undertakings.

3.32. Appropriate and effective group internal control mechanisms have to ensure that in particular risk concentration and intra group transactions are adequately assessed, monitored and reported, also taking into account various interlinkages and interdependencies between group members.

3.33. In order to allow an efficient information flow and transparency of decision making processes within the group, compatible IT-systems and IT-interfaces are an important basis for group internal control mechanisms.

3.34. The ultimate parent undertaking shall strengthen the internal control awareness among group members by introducing a strong control culture and demonstrating to all levels of personnel the importance of internal control.

I. Group Internal Audit

3.35. A group internal audit function should be established at the top level of the group. The group internal audit has to be objective and independent of all
operational functions on solo and group level (including the risk management function).

3.36. The group internal audit function should at least annually produce a written report on its findings to be submitted to the administrative, management or supervisory body of the subsidiary as well as the ultimate parent undertaking and the group respectively. The report shall cover at least any deficiencies with regard to the efficiency and suitability of the internal control system, as well as major shortcomings with regard to the compliance with internal policies, procedures and processes. It shall include recommendations on how to remedy inadequacies and also address past points of criticism.

3.37. The principles for the internal audit function at solo level as laid down in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance should also apply at group level. Furthermore, the tasks of the group internal audit should include the harmonisation of the auditing standards within the insurance group and the examination and evaluation of the group internal control system. Moreover, the group internal audit should assess the proper functioning of the internal auditing units of the individual undertakings of the group.

J. Compliance Function

3.38. At solo level, a compliance function has to be set up, in order to advise the administrative, management or supervisory body on the compliance with applicable laws and regulatory requirements. This compliance also has to be ensured at group level (e.g. by establishing a group compliance function).

K. Actuarial Function

3.39. In line with the requirements for solo undertakings, a group actuarial function should be established at group level. In line with the solo requirements as laid down in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance, the group actuarial function has to assess the general suitability of the methodologies or underlying models for the calculation of technical provisions used within the group and ensure their consistency. Moreover, the consideration and treatment of group specific risks as far as they are related to technical provisions has to be accounted for by the group actuarial function.

L. Management of liquidity

3.40. The group should have in place a framework for the group-wide management of liquidity, taking into consideration especially situations of financial disruption and their impact on group and solo undertakings.

3.41. The framework shall include clear agreements governing the usage of excess funds, supervision of each participant’s financial status and regular stress and transferability testing. Furthermore the prudent person principle shall be adhered to in a system of liquidity management (e.g. pooling of excess liquidity).
CEIOPS’ Advice

3.42. According to Article 246(1) of the Level 1 text the governance requirements set out with respect to solo undertakings shall apply mutatis mutandis at the level of the group. This implies that the ultimate parent undertaking is – without prejudice to its proper obligation to have in place a robust governance system at solo level – required to establish an effective system of governance at the level of the group which provides for sound and prudent management of the group business. This section does not constitute a conclusive Level II advice on the requirements of a group governance system. Nevertheless the views mentioned consecutively outline CEIOPS general view on governance issues on group level.

3.43. Risk management and internal control systems have to be implemented consistently throughout the group. This means that all relevant processes and procedures are implemented coherently within the whole group. This ensures a common understanding of the needs for functioning and reporting of risk management and enhances comparability and the quality of results. However, consistency does not mean that local or/and entity specificities should be disregarded.

3.44. The responsibility for an adequate risk management on solo level lies within the solo undertaking. The ultimate parent’s responsibility is to ensure a consistent implementation and a constant monitoring of all relevant processes covering all individual undertakings of a group, including appropriate tools and procedures enabling the parent undertaking to oversee and steer the functioning of risk management.

3.45. Risk management is a continuous process that should be used in the implementation of the group’s overall strategy and should allow an appropriate understanding of the nature and significance of the risks to which the group and its individual undertakings are exposed to. Special focus must be given to interdependencies, risk concentrations and intra-group transactions.

3.46. In order to ensure the effectiveness and consistency of the group wide risk management, the processes and procedures should be regularly – at least annually - evaluated and if necessary adjusted (e.g. if changes in the group structure take place).

3.47. According to Article 246(1), the requirements for a system of governance shall apply mutatis mutandis at the level of the group. Specificities have to be taken into account regarding the group perspective:

A. Risk Management Function

3.48. The ultimate parent undertaking should provide for a risk management function at group level, which is equipped with competent personnel resources (Fit and Proper requirements) and adequate systems. The establishment and tasks of the risk management function at group level should be in line with the solo requirements as referred to in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance.
B. Risk Management Strategy

3.49. The ultimate parent undertaking should have a comprehensive group wide risk management strategy in place and ensure the alignment of the individual risk management strategies with the group wide risk management strategy. Furthermore, the ultimate parent undertaking should demonstrate how the group wide risk management strategy impacts each regulated undertaking included in the scope of group supervision.

C. Adequate Written Policies

3.50. The ultimate parent company should have written policies at group level that ensure that the definition, categorisation and assessment of material risks as well as the reporting procedures are harmonised within the group.

D. Processes and Procedures

3.51. Appropriate processes and procedures which enable the ultimate parent undertaking to identify, measure, manage and monitor the risks the group is or might be exposed to need to provide for a sufficient link with corresponding reporting processes and procedures implemented on solo level.

E. Internal Reporting

3.52. In order to ensure consistent implementation of risk management systems, the ultimate parent undertaking has to have access to all relevant information.

F. Own Risk and Solvency Assessment (ORSA)

3.53. The ultimate parent undertaking should develop an appropriate own risk and solvency assessment (ORSA) process at group level and undertake at the level of the group this assessment as required by Article 246(4) first subparagraph. According to Article 246 (4) third subparagraph, it is also possible to have one document covering the assessment on solo and group level.

G. Emergency Planning and business continuity management

3.54. The main objective of emergency planning is to ensure, that essential business processes are not interrupted in a serious manner in the case of internal or external threats and that the economic existence and business continuity of the group is safeguarded.

H. Internal Control System on group level

3.55. The ultimate parent undertaking shall strengthen the internal control awareness among group members by introducing a strong control culture and demonstrating to all levels of personnel the importance of internal control. The group wide risk management system should be supported by a suitable, comprehensive and consistent internal control system.
I. Group Internal Audit

3.56. A group internal audit function should be established at the top level of the group. The group internal audit function has to be objective and independent of all operational functions on solo and group level (including the risk management function). The group internal audit function should at least annually produce a written report on its findings to be submitted to the administrative, management or supervisory body of the subsidiary as well as the ultimate parent undertaking and the group respectively. The report shall cover at least any deficiencies with regard to the efficiency and suitability of the internal control system, as well as major shortcomings with regard to the compliance with internal policies, procedures and processes. It shall include recommendations on how to remedy inadequacies and also address past points of criticism.

J. Compliance Function

3.57. At solo level, a compliance function has to be set up, in order to advise the administrative, management or supervisory body on the compliance with applicable laws and regulatory requirements. This compliance also has to be ensured at group level (e.g. by establishing a group compliance function).

K. Actuarial Function

3.58. In line with the requirements for solo undertakings, a group actuarial function should be established at group level. In line with the solo requirements as laid down in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance, the group actuarial function has to assess the general suitability of the methodologies or underlying models for the calculation of technical provisions used within the group and ensure their consistency. Moreover, the consideration and treatment of group specific risks as far as they are related to technical provisions has to be accounted for by the group actuarial function.

L. Management of Liquidity

3.59. The group should have in place a framework for the group-wide management of liquidity, taking into consideration especially situations of financial disruption and their impact on group and solo undertakings. The framework shall include clear agreements governing the usage of excess funds, emergency plans, supervision of each participant’s financial status and regular stress and transferability testing. Furthermore the prudent person principle shall be adhered to in a system of liquidity management (e.g. pooling of excess liquidity).
3.3. Principles of Centralised Risk Management

3.60. The application of the rules laid down in Subsection 6 implies certain benefits for insurance undertakings. A well document centralised risk management system may have a positive effect regarding the groups’ standing on the market. According to CEIOPS’ view, a more detailed decision making process between supervisors is one of the main benefits. Furthermore, information already gathered in the application for centralised risk management may result in a better understanding of group processes by supervisors and may therefore be considered during the group’s application for the approval of an internal model.

3.61. The principal condition for obtaining the permission to be subject to the supervisory regime pursuant to Articles 238 and 239 is that risk management processes and internal control mechanisms of the parent undertaking cover the subsidiary. This is a more specific requirement than the general requirement to establish an effective risk management mechanism at the level of the group as well as the requirement to implement risk management, internal control mechanism and reporting procedures consistently in all undertakings of a group as laid down in Article 246(1) of the Level 1 text.

3.62. Consequently, the establishment of centralised risk management goes beyond the requirement of Article 246(1) of the Level 1 text according to which the risk management, internal control systems and reporting procedures must be implemented consistently so that those systems can be controlled at the level of the group. Therefore, the implementation of centralised risk management is only applicable for subsidiaries (in line with the definition of subsidiaries according to Article 13(16) of the Level I text).

3.63. In CEIOPS’ view, the condition laid down in Article 236 point b of the Level 1 text is met if material tasks in relation to risk management and internal control are transferred substantially from the subsidiary to the ultimate parent undertaking. However, this explicitly does not mean, that any kind of responsibility is removed from the subsidiary.

3.64. All requirements set out in this advice must be adhered to on application and on a continuous basis while applying the relevant articles. Any significant changes have to be reported immediately to all supervisors concerned. The supervisors concerned include the group supervisor as well as the relevant competent solo supervisors.

3.65. In addition to the principles of group wide risk management, the following requirements for centralised risk management system should be fulfilled:

A. Risk Management Function

3.66. The scope of the risk management function at group level under subsection 6 is enlarged by those tasks related to risk management that are transferred from the subsidiary to the parent undertaking.
B. Risk Management Strategy

3.67. The development and implementation of a comprehensive risk management strategy at group and solo level should lie with the ultimate parent undertaking.

C. Adequate Written Policies

3.68. The ultimate parent undertaking has to set up comprehensive written policies that illustrate the risk management strategy and its implementation on group and solo level, also considering national specificities of the subsidiaries involved.

D. Processes and Procedures

3.69. The ultimate parent undertaking has to implement appropriate processes and procedures which enable it to identify, measure, manage, monitor and report the risks the group and its individual undertakings are or might be exposed to. These processes should also take into account specificities of individual solo undertakings and their impact on the solo and group risk profiles.

E. Internal Reporting

3.70. The ultimate parent undertaking should implement adequate reporting procedures to ensure a regular exchange of information with the solo insurance undertakings on all relevant issues regarding risk management. Information asymmetries between group and solo level should be avoided.

F. Own Risk and Solvency Assessment (ORSA)

3.71. The ultimate parent undertaking shall undertake the ORSA at the level of the group and at the level of all subsidiaries forming part of a group with centralised risk management at the same time, and shall produce a single document covering all the assessments as indicated in Article 250(4) third subparagraph of the Level 1 text.

G. Emergency Planning and business continuity management

3.72. Emergency Planning routines as stipulated under 3.28 have to be set up covering all solo entities subject to the subsection and the group as a whole.

H. Internal Control System on group level

3.73. According to Article 236 point b of the Level 1 text, the internal control mechanisms of the parent undertaking have to cover the subsidiary. The centralisation of risk management has an impact on the general internal control framework because of a shift of tasks. Therefore, the design and implementation of the internal control mechanism have to be adapted accordingly in order to ensure their effectiveness and well functioning.
I. Group Internal Audit

3.74. The same requirements as set out in 3.35 to 3.37 apply.

J. Compliance Function

3.75. The ultimate parent undertaking has to implement appropriate processes and procedures in order to manage the risk of non-compliance of the group and its individual undertakings. Adequate skills have to be maintained at solo-level, as the local legal framework may vary between member states (e.g. company law, tax law).

K. Actuarial Function

3.76. The same requirements as set in 3.39 have to be adhered to. Under centralized risk management tasks related to actuarial issues associated with the solo undertaking might be carried out by the group actuarial function. However, adequate actuarial skills have to be maintained at solo-level, as technical provisions and methodologies used are very closely linked to local market conditions.

L. Management of Liquidity

3.77. The same requirements as set in 3.40 and 3.41 have to be adhered to. It has to be emphasised, that the disposition over its funds must be guaranteed by the parent company for every single undertaking applying subsection 6 under all circumstances.

CEIOPS’ Advice

3.78. The establishment of centralised risk management goes beyond the requirement of Article 246(1) of the Level 1 text according to which the risk management, internal control systems and reporting procedures must be implemented consistently so that those systems can be controlled at the level of the group. Therefore, the implementation of centralised risk management is only applicable for subsidiaries (in line with the definition of subsidiaries according to Article 13 (16) of the Level I text).

3.79. In CEIOPS’ view, the condition laid down in Article 236 point b of the Level 1 text is met if material tasks in relation to risk management and internal control are transferred substantially from the subsidiary to the ultimate parent undertaking. However, in line with paragraph 1.6., this explicitly does not mean, that any kind of responsibility is removed from the subsidiary. This means that the all subsidiaries requirements (for example reporting requirements) remain unchanged.

3.80. All requirements set out in this advice must be adhered to on application and on a continuous basis while applying the relevant articles. Any significant changes have to be reported immediately to all supervisors concerned. The supervisors concerned include the group supervisor as well as the relevant competent solo supervisors.

3.81. In addition to the principles of group wide risk management, the following
requirements for a risk management system should be fulfilled:

A. Risk Management Function

3.82. The scope of the risk management function at group level under subsection 6 is enlarged by those tasks related to risk management that are transferred from the subsidiary to the parent undertaking.

B. Risk Management Strategy

3.83. The development and implementation of a comprehensive risk management strategy on group and solo level should lie with the ultimate parent undertaking.

C. Adequate Written Policies

3.84. The ultimate parent undertaking has to set up comprehensive written policies that illustrate the risk management strategy and its implementation on group and solo level, also considering national specificities of the subsidiaries involved.

D. Processes and Procedures

3.85. The ultimate parent undertaking has to implement appropriate processes and procedures which enable it to identify, measure, manage, monitor and report the risks the group and its individual undertakings are or might be exposed to. These processes should also take into account specificities of individual solo undertakings and their impact on the solo and group risk profiles.

E. Internal Reporting

3.86. The ultimate parent undertaking should implement adequate reporting procedures to ensure a regular exchange of information with the solo insurance undertakings on all relevant issues regarding risk management. Information asymmetries between group and solo level should be avoided.

F. Own Risk and Solvency Assessment (ORSA)

3.87. The ultimate parent undertaking shall undertake the ORSA at the level of the group and at the level of all subsidiaries forming part of a group with centralised risk management at the same time, and shall produce a single document covering all the assessments as indicated in Article 246(4) third subparagraph of the Level 1 text.

G. Emergency Planning and business continuity management

3.88. Emergency Planning routines as stipulated under 3.54 have to be set up covering also all solo entities subject to the subsection and the group as a whole.

H. Internal Control System on group level

3.89. According to Article 236 point b of the Level 1 text, the internal control
mechanisms of the parent undertaking have to cover the subsidiary. The centralisation of risk management has an impact on the general internal control framework because of a shift of tasks. Therefore, the design and implementation of the internal control mechanism have to be adapted accordingly in order to ensure their effectiveness and well functioning.

I. Group Internal Audit

3.90. The same requirements as set out in 3.56 apply.

J. Compliance Function

3.91. The ultimate parent undertaking has to implement appropriate processes and procedures in order to manage the risk of non-compliance of the group and its individual undertakings. Adequate skills have to be maintained at solo-level, as the local legal framework may vary between member states (e.g. company law, tax law).

K. Actuarial Function

3.92. All requirements set in 3.58 have to be adhered to. Under centralized risk management tasks related to actuarial issues associated with the solo undertaking might be carried out by the group actuarial function. However, adequate actuarial skills have to be maintained at solo-level, as technical provisions and methodologies used are very closely linked to local market conditions.

L. Management of Liquidity

3.93. The same requirements as set in 3.59 have to be adhered to. The Framework has to provide for clear procedures for contingency planning on the level of the subsidiary.

3.4. Organisational forms:

3.94. There exists a broad range of instruments through which centralisation of risk management tasks can be achieved. Two approaches are presented below. However, all approaches regarding the application of article 238 and 239 are assessed on a case by case basis, taking into account the characteristics and specificities of each applicant.

Outsourcing

3.95. In general, outsourcing refers to the concept as stipulated in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance. The (re)insurance undertaking ultimately remains responsible for all outsourced functions and activities, having to ensure an effective control of the outsourced activities. These concepts also apply when tasks are delegated within a group.
3.96. Under subsection 6 the function and tasks of risk management is primarily expected to be outsourced to the parent undertaking. However, risk management can also be outsourced to another service provider being part of the group. In CEIOPS’ view, this procedure could be allowed provided that all conditions linked to the outsourcing of the critical or important functions or activities are met.

3.97. Risk management is defined as a critical and important function. In line with Article 49 (2) of the Level 1 text, outsourcing must not lead to an impaired quality of the governance system of the subsidiary concerned, an increase of its operational risk, an impairment of the supervisor’s ability to monitor the compliance of the subsidiary with its obligations or an impairment of a continuous and satisfactory service to policyholders.

3.98. In case of a centralisation of risk management by outsourcing, the following requirements, additional to the ones set out in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance, have to be fulfilled:

   a. It has to be stipulated how and in which way, and to what extent the parent undertaking will manage and monitor the risks of the group and its individual entities (comprehensive control).
   b. The group wide risk management strategy should be illustrated and it should be explained how the solo risk management strategy is covered by the group wide risk management strategy.
   c. Intervention rights and processes have to be defined to ensure that the subsidiary is able to avoid decisions having a negative impact on its policy holders or the solvency or financial position of the solo undertaking.

3.99. In accordance with the general principles on outsourcing, the outsourcing agreement should clearly state that the subsidiary has the right to terminate the outsourcing agreement within a reasonable period of notice if for any reason the services rendered should prove to be inadequate. The parent undertaking or a third party service provider can only terminate the contract with a period sufficiently long to enable the subsidiary to find an alternative solution. In case of a termination of any of the outsourcing contracts regarding centralised risk management, the supervisory authorities concerned shall be informed without delay.

**Examples of group arrangements**

3.100. The level 1 text does not foresee any specific group arrangements. One example of group arrangements that are used in some jurisdictions are domination agreements. As the instrument of domination agreements is only allowed in some jurisdictions, their use for centralized risk management may be limited to some subsidiaries of a group where those regulations exist. There might be other forms of group arrangements possible, which cover the requirements of a centralized risk management.

3.101. If groups are organised stringently via domination agreements (including transfer of profit/loss agreements), material tasks are transferred from the subsidiary to the parent undertaking. This may also include tasks
regarding risk management. Such a structure would also fall under the scope of Article 236 on centralised risk management.

3.102. The impact of domination agreements is limited in so far, as rights and interests of policyholders are not jeopardised. Therefore, it should include a declaration of the undertaking(s) in charge of performing the centralised task(s) stating that no decisions will be taken, that would result in a violation of rights and interests of policyholders of the subsidiary or the breach of regulatory requirements to be observed by the subsidiary.

3.103. If a domination agreement also covers centralised risk management, it has to be emphasised that the responsibility for all issues related to risk management remains with the subsidiary.

3.104. In case of a termination of the domination agreement, the supervisory authorities concerned shall be informed without delay.

**CEIOPS’ Advice**

3.105. There exists a broad range of instruments through which centralization of risk management tasks can be achieved. Two approaches are presented below. However, all approaches regarding the application of article 238 and 239 are assessed on a case by case basis, taking into account the characteristics and specificities of each applicant.

**Outsourcing**

3.106. In general outsourcing refers to the concept as stipulated in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance. The (re)insurance undertaking ultimately remains responsible for all outsourced functions and activities, having to ensure an effective control of the outsourced activities. These concepts also apply when tasks are delegated within a group.

3.107. Under subsection 6 the function and tasks of risk management is primarily expected to be outsourced to the parent undertaking. However, risk management can also be outsourced to another service provider being part of the group. In CEIOPS’ view, this procedure could be allowed provided that all conditions linked to the outsourcing of the critical or important functions or activities are met.

3.108. In case of a centralisation of risk management by outsourcing, the following requirements, additional to the ones set out in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance, have to be fulfilled:

   a. It has to be stipulated how and in which way, and to what extent the parent undertaking will manage and monitor the risks of the group and its individual entities (comprehensive control).

   b. The group wide risk management strategy should be illustrated and it should be explained how the solo risk management strategy is covered by the group wide risk management strategy.

   c. Intervention rights and processes have to be defined to ensure that
3.109. In accordance with the general principles on outsourcing, the outsourcing agreement should clearly state that the subsidiary has the right to terminate the outsourcing agreement within a reasonable period of notice if for any reason the services rendered should prove to be inadequate. The parent undertaking or a third party service provider can only terminate the contract with a period sufficiently long to enable the subsidiary to find an alternative solution. In case of a termination of any of the outsourcing contracts regarding centralised risk management, the supervisory authorities concerned shall be informed without delay.

**Group arrangements**

3.110. The level 1 text does not foresee any specific group arrangements. The impact of any form of group agreements has to be limited in so far, as rights and interests of policyholders are not jeopardised. If a group arrangement also covers centralised risk management, it has to be emphasized that the responsibility for all issues related to risk management remains with the subsidiary.

3.111. In case of a termination of a group arrangement, the supervisory authorities concerned shall be informed without delay.

### 3.5. Prudent Management of the Subsidiary

3.112. One of the major conditions for prudent management of the subsidiary by the parent company is the implementation of an effective system of governance on solo and group level as defined Title I Chapter IV Section 2 as well as Article 246 the Level I text respectively.

3.113. In case of centralised risk management, the ultimate parent undertaking has to demonstrate that the subsidiary has an effective governance system in place, even if certain key functions are covered by the ultimate parent undertaking. The requirement of a sound and prudent management of the subsidiary implies also, that the ultimate parent undertaking has to demonstrate, that an effective governance system also exists on group level.

3.114. A key issue regarding a prudent management of a subsidiary are transparent and comprehensible decision making processes. This is important, as any kind of centralisation shall not influence the prudent management of the solo undertakings in an adverse way (e.g. policyholder’s interests, regulatory requirements).

**CEIOPS’ Advice**

3.115. CEIOPS considers one of the major conditions for prudent management of the subsidiary being the existence of an effective system of governance on solo and group level as defined by Title I Chapter IV Section 2 and Article
3.116. In case of centralised risk management, the ultimate parent undertaking has to demonstrate that the subsidiary has an effective governance system in place, even if certain key functions are covered by the ultimate parent undertaking.

3.117. A key issue regarding a prudent management of a subsidiary are transparent and comprehensible decision making processes.

3.6. Application Process and Supervisory Colleges

Application Process

3.118. The application process to be subjected under the article 238 and 239 of the Level 1 text is stipulated in article 237. This application process is different regarding the submission and approval of the application compared to the general process explained in CP 62 para 3.13-3.16.

3.119. The parent undertaking submits the application for its subsidiary, including all relevant information, to the solo supervisor having authorized the subsidiary concerned. Furthermore, the ultimate parent undertaking should demonstrate how the group wide risk management strategy impacts each regulated undertaking included in the scope of group supervision. CEIOPS expects the solo supervisor to inform the group supervisor promptly after having received all relevant data.

3.120. CEIOPS strongly recommends that all applications submitted within a group shall be presented in a consistent and comparable form to the supervisory authorities concerned.

3.121. Nevertheless CEIOPS expects the parent undertaking to submit a comprehensive overview of all the applications of the undertakings it chooses to subject under the regulations of article 238 and 239. Simultaneously, they shall submit an overall view to the group supervisor.

3.122. The application should include at least:

- A cover letter requesting approval of Centralized Risk Management System according to article 236 (b) of the Framework Directive, approved and signed by the administrative, management or supervisory body of the subsidiary and the parent undertaking applying including the rationale for the application and relevant contact information (e.g. members of the project team at the subsidiary and the parent company). The parent undertaking should submit a list of all subsidiaries which are considered to apply for Centralised Risk Management.

- A formal confirmation that all necessary measures and processes have been implemented and that the documents provided are complete and present a true and fair summary of all topics, has to be submitted. This formal confirmation also has to be approved and signed by the
administrative, management or supervisory body of the subsidiary and the parent undertaking applying. Documents shall be provided describing how the subsidiary is integrated in the centralised risk management system and how the functions mentioned in 3.83 to 3.84 are centralised. Furthermore, an impact analysis has to be provided showing the effects of centralization on the subsidiary (including management of liquidity).

- A documentation of internal reporting processes and technical specifications in order to demonstrate a harmonised information flow. A statement of the subsidiary that the compliance with local laws and regulations is not prejudiced by the application to be subjected to Articles 238 and 239.

3.123. Upon receipt of all applications plus all relevant information the group supervisor will discuss the application within the college and try to reach a joint decision within 3 months. In those cases where several applications have been made, the College shall discuss them jointly. In case of diverging views on the application the group supervisor or any of the other supervisory authorities concerned may consult the CEIOPS. In this case, the period of three months will be extended by one month. The supervisory authority having authorised the subsidiary, shall provide to the applicant the joint decision in a document containing the fully reasoned decision and an explanation of any significant deviation from the positions of CEIOPS, where it has been consulted. In the absence of a joint decision between the supervisory authorities concerned, the group supervisor shall make its own decision on the application.

Cooperation in the Supervisory College

3.124. The cooperation within the college of supervisors shall enable supervisors to develop a common understanding of the risk profile of the group which is essential for the assessment of the functioning of centralised risk management.

3.125. In this context, details on the groups’ system of governance, including risk management and capital management, as well as the key group risks that could affect solo undertakings in the future are essential information of the group report to supervisors (RTS).

3.126. The group supervisor who produces an overview of the group through a general top down approach shall especially attach importance to the overall standard of corporate governance of the group and an assessment of its adequacy for the risk profile of the group and the overall risk profile as well as the strategies for centralised risk management.

3.127. If a supervisory authority becomes aware of the emergence of a potentially serious financial disturbance or is aware of facts or events that may give rise to significant problems for an insurance group will inform as soon as possible the group supervisor. The group supervisor or the mentioned supervisory authority should ensure that the information is shared within the supervisory college as soon as practicable. After a crisis alert, the group supervisor should as soon as practicable assess the nature of the crisis and its implications for the relevant insurance group, including
identification of possible sources of systemic risk⁴, implications to the risk strategy of the group and the influence on the centralised risk management with effects on solo undertaking.

3.128. Further guidance on the cooperation process regarding group supervision issues, in particular related to Articles 238 and 239, may be provided at Level 3.

**CEIOPS’ Advice**

### Application Process

3.129. The application process to be subjected under the article 238 and 239 of the Level 1 text is stipulated in article 237. This application process is different regarding the submission and approval of the application compared to the general process explained in CP 62 para 3.13-3.16.

3.130. The parent undertaking submits the application for its subsidiary, including all relevant information, to the solo supervisor having authorised the subsidiary concerned. CEIOPS expects the solo supervisor to inform the group supervisor promptly after having received all relevant data.

3.131. CEIOPS strongly recommends that all applications submitted within a group shall be presented in a consistent and comparable form to the supervisory authorities concerned.

3.132. Nevertheless CEIOPS expects the parent undertaking to submit a comprehensive overview of all the applications of the undertakings it chooses to subject under the regulations of article 238 and 239.

3.133. Upon receipt of all applications plus all relevant information the group supervisor will discuss the application within the college and try to reach a joint decision within 3 months. In those cases where several applications have been made, the College shall discuss them jointly.

3.134. If there are material changes in the organisation or the business of the group, then the group has to inform the relevant solo supervisors and the group supervisor that have to check whether the group is still centralised.

### Content of application

3.135. The application should include at least:

- A cover letter requesting approval of Centralized Risk Management System according to article 236 (b) of the Framework Directive, approved and signed by the administrative, management or supervisory body of the subsidiary and the parent undertaking applying including the rationale for the application and relevant contact information (e.g. members of the project team at the subsidiary and the parent company). The parent undertaking should submit a list of all subsidiaries which are considered to

---

apply for Centralised Risk Management.

- A formal confirmation that all necessary measures and processes have been implemented and that the documents provided are complete and present a true and fair summary of all topics, has to be submitted. This formal confirmation also has to be approved and signed by the administrative, management or supervisory body of the subsidiary and the parent undertaking applying. Documents shall be provided describing how the subsidiary is integrated in the centralised risk management system and how the functions mentioned in 3.82 to 3.93 are centralised.

- A documentation of internal reporting processes and technical specifications in order to demonstrate a harmonised information flow.

**Cooperation in the Supervisory College**

3.136. The cooperation within the college of supervisors shall enable supervisors to develop a common understanding of the risk profile of the group which is essential for the assessment of the functioning of centralised risk management.

3.137. Joint on site inspections may be an appropriate tool to assess the well functioning of CRM.

3.138. In this context, details on the groups’ system of governance, including risk management and capital management, as well as the key group risks that could affect solo undertakings in the future are essential information of the group report to supervisors (RTS).

3.139. The group supervisor who produces an overview of the group through a general top down approach shall especially attach importance to the overall standard of corporate governance of the group and an assessment of its adequacy for the risk profile of the group and the overall risk profile as well as the strategies for centralised risk management.

3.140. If a supervisory authority becomes aware of the emergence of a potentially serious financial disturbance or is aware of facts or events that may give rise to significant problems for an insurance group will inform as soon as possible the group supervisor.

### F. Own risk and solvency assessment

The ultimate parent undertaking should develop an appropriate own risk and solvency assessment (ORSA) process at group level and undertake at the level of the group this assessment as required by Article 246(4) first subparagraph. According to Article 246 (4) third subparagraph, it is also possible to have one document covering the assessment on solo and group level.

The ultimate parent undertaking shall undertake the ORSA at the level of the group and at the level of all subsidiaries forming part of a group with centralised risk management at the same time, and shall produce a single document covering all the assessments as indicated in Article 246(4) third subparagraph of the Level 1 text.

### G. Emergency planning and business continuity management

The main objective of emergency planning is to ensure, that essential business processes are not interrupted in a serious manner in the case of internal or external threats and that the economic existence and business continuity of the group is safeguarded.

Emergency Planning routines as stipulated under 3.54 have to be set up covering also all solo entities subject to the subsection and the group as a whole.

### H. Internal control System

The ultimate parent undertaking shall strengthen the internal control awareness among group members by introducing a strong control culture and demonstrating to all levels of personnel the importance of internal control. The group wide risk management system should be supported by a suitable, comprehensive and consistent internal control system.

According to Article 236 point b of the Level 1 text, the internal control mechanisms of the parent undertaking have to cover the subsidiary. The centralisation of risk management has an impact on the general internal control framework because of a shift of tasks. Therefore, the design and implementation of the internal control mechanism have to be adapted accordingly in order to ensure their effectiveness and well functioning.

### I. Group internal Audit

A group internal audit function should be established at the top level of the group. The group internal audit function has to be objective and independent of all operational functions on solo and group level (including the risk management function). The group internal audit function should at least annually produce a written report on its findings to be submitted to the administrative, management or supervisory body of the subsidiary as well as the ultimate parent undertaking and the group respectively. The report

The same requirements as set out in 3.56 apply.

<thead>
<tr>
<th>Section</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>J. Compliance function</td>
<td>At solo level, a compliance function has to be set up, in order to advise the administrative, management or supervisory body on the compliance with applicable laws and regulatory requirements. This compliance also has to be ensured at group level (e.g. by establishing a group compliance function). The ultimate parent undertaking has to implement appropriate processes and procedures in order to manage the risk of non-compliance of the group and its individual undertakings. Adequate skills have to be maintained at solo-level, as the local legal framework may vary between member states (e.g. company law, tax law).</td>
</tr>
<tr>
<td>K. Actuarial Function</td>
<td>In line with the requirements for solo undertakings, a group actuarial function should be established at group level. In line with the solo requirements as laid down in CEIOPS’ Advice to the Commission on Level 2 implementing measures for the system of governance, the group actuarial function has to assess the general suitability of the methodologies or underlying models for the calculation of technical provisions used within the group and ensure their consistency. Moreover, the consideration and treatment of group specific risks as far as they are related to technical provisions has to be accounted for by the group actuarial function. All requirements set in 3.58 have to be adhered to. Under centralized risk management tasks related to actuarial issues associated with the solo undertaking might be carried out by the group actuarial function. However, adequate actuarial skills have to be maintained at solo-level, as technical provisions and methodologies used are very closely linked to local market conditions.</td>
</tr>
<tr>
<td>L. Management of Liquidity</td>
<td>The group should have in place a framework for the group-wide management of liquidity, taking into consideration especially situations of financial disruption and their impact on group and solo undertakings. The framework shall include clear agreements governing the usage of excess funds, emergency plans, supervision of each participants financial status and regular stress and transferability testing. Furthermore the prudent person principle shall be adhered to in a system of liquidity management (e.g. pooling of excess liquidity). The same requirements as set in 3.59 have to be adhered to. The Framework has to provide for clear procedures for contingency planning on the level of the subsidiary.</td>
